When you teach a young woman to code, there is nothing she can’t do.

When you give that young woman a home, there’s no one she can’t be.

The crossroads at which many girls find themselves after graduating high school can be intimidating. G|Code House is an innovative, place-based initiative which connects young women of color to educational and employment opportunities in the technology sector. This initiative combines affordable co-living, technology instruction, industry placements, and post-secondary education.

Objectives
- Invest in the Youth: Communal spaces and shared experiences, aiming to foster growth outside of the classroom.
- Combat Gentrification: Preserve the character and history of the neighborhood while ensuring that the women are integral in the revitalization.
- Empower Women: A safe space that is comfortable and domestic, an exterior atmosphere that is welcoming and community-oriented.
